1 Problem Statement

.

1.1 Problem

1.2 Inputs and Outputs

1.3 Stakeholders

1.4 Environment

2 Goals

3 Stretch Goals

4 Custom Documents (CDs)

- **User/Stakeholder/Client Interview Report** – Documents the interviews conducted with users, stakeholders, and clients to gather require-

ments for the application.

- **Usability Testing Report** – Documents the usability testing of the application, including the goals of the testing, the specific tasks we ask users to complete, the specific questions we ask users, and the results

Appendix — Reflection

The purpose of reflection questions is to give you a chance to assess your own learning and that of your group as a whole, and to find ways to improve in the future. Reflection is an important part of the learning process. Reflection is also an essential component of a successful software development process.

Reflections are most interesting and useful when they're honest, even if the stories they tell are imperfect. You will be marked based on your depth of thought and analysis, and not based on the content of the reflections themselves. Thus, for full marks we encourage you to answer openly and honestly and to avoid simply writing "what you think the evaluator wants to hear."

Please answer the following questions. Some questions can be answered on the team level, but where appropriate, each team member should write their own response:

1. What went well while writing this deliverable?
2. What pain points did you experience during this deliverable, and how did you resolve them?
3. How did you and your team adjust the scope of your goals to ensure they are suitable for a Capstone project (not overly ambitious but also of appropriate complexity for a senior design project)?
